Hiring Manager

Talan

Abu Dhabi, UAE

Dear Hiring Manager,

With 15+ years leading large-scale technology transformation programmes across the Middle East, I am excited about the opportunity to serve as Chief Technology Officer for Talan's Smart Metering Programme in Abu Dhabi. My leadership experience spans enterprise IT transformations, IoT implementations, and critical infrastructure programmes that share key characteristics with smart metering initiatives:

- Programme Leadership: Led \$25M+ transformation initiatives with multi-vendor ecosystems and complex stakeholder environments
- Enterprise Integration: Directed technology roadmaps spanning multiple systems (meters, communications, HES, MDMS, and IT components)
- Strategic Architecture: Developed technical strategies ensuring cybersecurity, scalability, and interoperability across platforms
- Vendor Management: Managed strategic technology partnerships across engineering, testing, and integration teams
- Operational Excellence: Delivered 40% efficiency gains through AI-driven process optimization

I am particularly drawn to Talan's Smart Metering Programme because it represents the convergence of several disciplines I have mastered: large-scale IT transformation, enterprise system integration, and technology strategy at the executive level. My engineering background and PMP certification provide the formal framework for programme leadership, while my hands-on experience leading complex digital transformations provides the practical expertise to deliver results from day one. I would welcome the opportunity to discuss how my experience can accelerate Talan's Smart Metering objectives.

Thank you for considering my application. I look forward to discussing how my experience in smart metering and enterprise IoT integration can contribute to Talan's continued success.

Sincerely,

Ahmed Nasr
